Oxyframe

Application#60/407,675

(909) 922-3586

Specification

0001 This idea is a combination of eyeglasses and the breathing tube that a person uses when on oxygen. What happens is the eyeglasses are hollow from the end of the arms around the lenses down to the hose fitting nipples, which reaches the nose piece, into the nose. Both arms have a single nipple that attaches to the oxygen tube that runs to the oxygen tank.

0002 The eyeglass frames are made of common materials used in the process of making frames.
